PROFILE

Senior engineer with 7+ years shipping production systems in fintech, e-commerce and social platforms. Currently building **withlove.so**, a solo-founded AI agent platform with RAG, voice-style modeling, and cross-LLM tool calling in production. Strong backend foundation (Node.js, Rust, Kafka, AWS) with deep work on real-time, event-driven systems at Emirates NBD. Focus: take AI from prototype to something users can actually rely on.

SKILLS

AI & Agents

LLMs (OpenAI, Anthropic), RAG, Vector Search, Embeddings, Tool Calling, Agent Workflows, Prompt Engineering, Model Context Protocol, `/ .well-known/agent.json` (cross-LLM agent discovery)

Languages & Runtime

TypeScript, JavaScript, Node.js, Rust

Backend & Architecture

Event-Driven Systems, Microservices, REST, GraphQL, Apollo Federation, Domain-Driven Design

Frontend

React, Next.js, Redux, Design Systems

Cloud & Infra

AWS (Lambda, ECS, EC2, SNS, SQS), Docker, CI/CD

Data & Messaging

PostgreSQL, MongoDB, Kafka, Elasticsearch, Vector DBs

FOUNDER PROJECT

withlove.so - Founder & Solo Builder

Mar 2025 - Present | Live in private beta

Personal AI agent platform for solopreneurs. Every user gets a shareable link with their own agent that answers in their voice, books their real calendar, and takes payments inside the chat.

- Built a RAG pipeline that ingests the last 90 days of a user's Instagram captions, DMs, and comment replies to learn tone, language mix, signature phrases and boundaries. Style profile refreshes weekly.
 - Shipped agentic booking and payment flows: agent reads Google Calendar availability, holds slots, takes payment in chat, and confirms back to the user.
 - Implemented the cross-LLM agent discovery standard via `/ .well-known/agent.json`, so the agent is callable directly from ChatGPT, Claude and Gemini, not just the web UI.
 - Multi-language responses across 132+ locales using per-user language detection from past content.
 - Instagram DM integration: auto-replies to repeat fan questions in the user's voice, routes high-intent messages to the human.
 - Solo build: product, infra, AI pipeline, frontend, billing. Stack: Next.js, TypeScript, Node.js, Postgres, vector store, OpenAI + Anthropic.
-

WORK EXPERIENCE

Senior Full Stack / Backend Engineer

Emirates NBD - Dubai, UAE | Mar 2024 - Present

- Architected real-time payment tracking processing high-volume transactions on AWS Lambda and Kafka, improving traceability and cutting settlement delays.
- Built the Statement Manager module for the Business Online app, enabling secure on-demand downloads of account, credit card, loan and FD statements for enterprise clients.

- Engineered a polyglot backend combining Rust and Node.js for the document engine, delivering 10x faster statement generation versus the legacy system while staying inside regulatory compliance.

Full Stack Engineer

Noumena - Miami, USA (remote) | Dec 2021 - Dec 2023

- Built backend services for a professional social network and freelancer support platform supporting networking, team hiring and idea funding flows.
- Designed Node.js microservices using Domain-Driven Design, twelve services behind an Apollo Federation gateway, zero dropped messages at ~50ms latency.
- Contributed to blockchain-integrated workflows including Ethereum smart contract interactions and decentralised data flows.

Full Stack Engineer

Tokopedia - Noida, India | Dec 2020 - Dec 2021

Work featured twice at Google I/O

- Developed high-performance backend APIs for Tokopedia's mobile web Discovery platform under strict latency SLAs. TTFB held at 87ms; APIs were the basis of the I/O showcase.
- Built internal admin tooling that managed large-scale sales campaigns and dynamic content moving millions in GMV daily.

Full Stack Engineer

To The New - Noida, India | Jan 2019 - Dec 2020

- Led API rebuild for Kokaihop 3.0 supporting 2,000 concurrent users with Elasticsearch (~20ms search), RabbitMQ and Node cluster mode.
- Built Bharti AXA's offline-first insurance PWA with multi-level form wizard and Redux state.

Freelance Full Stack (MERN)

Man the Bay - Urban-Ed Academy | 2021 - 2022

- Solo MERN build (MongoDB, Express, React, Node) for a 4-year Bay Area fellowship program.

EDUCATION

B.Tech, APJ Abdul Kalam Technical University
